Summary

Instead of the letters/symbol being flush with the rest of the face plate, I made it inset with colors at the back.

This is a modified MMU version of the LCD cover for the Prusawire 2025.B1 by Ella Fox. Instead of the letters being flush, there are modifier boxes (and cylinder) behind the letters that allow you to have the colors inset. It works better than just painting on the surface, since this technique forces the slicer to bridge across the letters.

The MMU file was prepared in PrusaSlicer 2.9.2.

Bambu Studio version of the 3mf was kindly provided by erikbuild
